## DETAILED ACTION

### *Response to Amendment and Argument*

1. The examiner has reviewed the amendment and remarks filed by applicant on 8/22/03. Consequently, the rejection made in the prior Office action is **withdrawn**. Therefore the following non-final rejection is considered appropriate.

### *Drawings*

2. The drawings are objected to because to minor informalities: "PRNIT IMAGE" should be corrected to "PRINT IMAGE" in fig. 17. Correction is required.

### *Claim Rejections - 35 USC § 112*

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

For at least claims 1 and 5, the specification and figures do not support the limitation is described in this claim: " ... in such a manner that **print data**, which represents at least one of

Art Unit: 2624

images and characters to be printed, **is applied to each of the plurality of printers ...**”

(emphasis added). In contrast, the specification of the application, with respect to fig. 19 and lines 5-11 of page 18, one of print images is distributed to one of the plurality of printers.

Therefore, the specification of the application does not teach the same print data to be distributed to each of the printers, and the claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.
